

1 Pulse

- **Definition:** A **Pulse** is a collection of **IoCs (Indicators of Compromise)** tied to a specific threat, malware, or campaign.
- **Purpose:** Allows SOC analysts to see the **entire attack footprint** at once instead of individual IoCs.
- **Components of a Pulse:**
 - **Threat Name:** e.g., Emotet, TrickBot, Ryuk
 - **List of IoCs:** IP addresses, domains, URLs, file hashes linked to the threat
 - **Tags:** Categories like ransomware, phishing, botnet
 - **References:** Links to blogs, security reports, or advisories
- **Usage in SOC:**
 - Quickly understand **what indicators are active** for a threat.
 - Focus hunting or alert correlation in SIEM on these indicators.
- **Example:** Clicking on an Emotet Pulse shows all known C2 servers, payload hashes, and related domains.

2 Search

- **Definition:** A search bar that lets you **look up any indicator:** IP, domain, URL, or file hash.
- **Purpose:** Helps verify if an email, file, or network event is **malicious**.
- **How to Use:**
 1. Type an indicator (e.g., 192.168.1.50 or malicious-site.com)
 2. Results show:
 - Whether the indicator is known as malicious
 - Which pulse(s) it belongs to
 - Type of threat (phishing, malware, botnet)
 - Confidence or risk score
- **SOC Benefit:** Quickly validate alerts from SIEM or firewall logs.

3 Indicators

- **Definition:** This section lists **all individual IoCs** shared by the OTX community.
- **Purpose:** Lets you explore **specific indicators independently** of pulses.
- **Types of Indicators:**
 - IPv4 / IPv6 addresses
 - Domains / URLs
 - File hashes (MD5, SHA1, SHA256)
- **Usage:**
 - Identify malicious hosts contacting your network
 - Cross-check threat intelligence from other sources
 - Import IoCs into detection tools or SIEM

4 Your Profile

- **Definition:** Personalized area where you manage **followed pulses, alerts, and activity**.

- **Purpose:** Helps track threats and **stay updated on active campaigns.**
- **Features:**
 - **Follow Pulses:** Get notifications when new IoCs are added
 - **Follow Threat Actors:** Track campaigns by specific attackers
 - **Saved Indicators:** Maintain a custom list for your organization
 - **Contribution History:** Submit new pulses and share findings with the community
- **SOC Benefit:** Continuous threat monitoring without manually checking every pulse.

◆ Quick Analogy for Dashboard Sections

Section	Analogy	SOC Use Case
Pulse	Case file	See all IoCs for a specific malware campaign
Search	Detective search tool	Verify individual indicators quickly
Indicators	Evidence locker	Explore all malicious indicators in detail
Your Profile	Personal notebook & alerts	Track threats & follow relevant campaigns
