

1. How to Check *IP Reputation*

You can use these free tools:

A. AbuseIPDB (Best for IP reputation)

Website: abuseipdb.com

What it shows:

- Whether IP is used for attacks
- Spam reports
- Brute-force attempts
- Malware activity
- Community reports

Steps:

1. Open AbuseIPDB
2. Enter the IP
3. Check **Confidence Score** (0–100)
4. Higher score = more dangerous IP

B. VirusTotal (IP reputation + threat intelligence)

Website: virustotal.com → *IP Address* tab

What it shows:

- Blacklist reports
- Malware communication
- Suspicious activities
- Sandbox analysis

Steps:

1. Open VirusTotal
2. Go to **IP Address**
3. Paste IP
4. See if any vendors flagged it

C. Talos Intelligence (Cisco)

Website: talosintelligence.com

What it shows:

- Sender reputation
- Email reputation
- IP threat history

Steps:

1. Go to Talos
2. Paste IP
3. Check **Reputation Score**: Good / Neutral / Poor

D. AlienVault OTX

Website: otx.alienvault.com

What it shows:

- Threat pulses
- Malware C2 IPs
- Attack campaigns

Additional Tools:

- IPVoid
- ProjectHoneypot
- GreyNoise (for attacker IPs)

2. How to Check *URL Reputation*

Use these tools to check if a website is safe:

A. VirusTotal (Best URL analysis tool)

Website: [virustotal.com](https://www.virustotal.com) → *URL tab*

Shows:

- Blacklists
- Malware
- Phishing
- Redirects
- Website behavior

Steps:

1. Open VirusTotal
2. Choose **URL**
3. Paste the link
4. Check detection results

B. URLScan.io (Best for redirect + deep analysis)

Website: urlscan.io

Shows:

- Redirect chain
- Screenshot
- Requested files
- Scripts
- IPs contacted
- Domain age

Steps:

1. Go to URLScan

2. Paste URL
3. Submit
4. Check **Redirects** and **Indicators** section

C. Google Safe Browsing Checker

Website: <https://transparencyreport.google.com/safe-browsing>

Shows:

- Whether Google marked website as unsafe
- Phishing or malware status

Additional URL Reputation Tools:

- Sucuri SiteCheck
- Kaspersky Threat Intelligence
- Norton Safe Web
- Phishtank (for phishing links)
