

SAMPLE DIGITAL FORENSICS REPORT FORMAT

Below is a clean, professional format you can use.

DIGITAL FORENSICS INVESTIGATION REPORT

Case ID: DF-2025-014

Investigator: *Your Name*

Date: DD/MM/YYYY

Device: 1 TB Seagate HDD

Image Hash (SHA-256): *<hash value>*

1. Executive Summary

This investigation was conducted to identify unauthorized activities on the target HDD. Evidence was acquired using forensic imaging and analyzed using Autopsy and FTK.

Key findings include:

- Deleted files recovered
- Suspicious program execution
- USB data transfer detected
- Browser artifacts show unusual search activity

2. Evidence Acquisition

- Evidence received on: *Date*
- Write blocker used: **Yes/No**
- Imaging tool: **FTK Imager / EnCase / dd**
- Hash values before and after imaging matched → integrity confirmed.

3. System Information

- HDD Size: 1 TB
- File System: NTFS
- Number of partitions: 3

4. Findings

4.1 File System Analysis

- 432 deleted files recovered
- 12 files manually timestamp-modified
- Hidden folders discovered in C:\Users\Admin\AppData\Roaming\TempData

4.2 OS Artifacts

- Prefetch shows frequent execution of:
 - notepad.exe
 - teamviewer.exe
- Registry indicates 5 USB devices connected recently

4.3 Browser Activity

- Chrome browsing history shows:

- Visits to cloud storage websites
 - Suspicious downloads from unknown domain
- Chrome extensions include:
 - Suspicious extension "PDF Converter Pro"

4.4 USB Activity

- 16 GB SanDisk USB connected on: **12 Nov 2025, 14:33 PM**
- Files copied: ~1.2 GB (based on ShellBags and LNK references)

4.5 Malware Indicators

- Two suspicious executables found:
 - clientupdate.exe (unknown publisher)
 - system32check.exe
- No active rootkit found
- Persistence: Scheduled Task named "System Update"

4.6 Timeline Summary

- 11 Nov 2025 – USB insertion
- 12 Nov 2025 – File deletions and downloads
- 13 Nov 2025 – Prefetch indicates suspicious software executed

5. Conclusion

The analysis indicates possible unauthorized file transfers and execution of unknown applications. Browser history and USB activity support potential data exfiltration.

6. Tools Used

- Autopsy
- FTK Imager
- Volatility
- Wireshark
- Magnet AXIOM

7. Recommendations

- Reset system credentials
- Block USB storage
- Enable logging
- Conduct network-wide malware scan
