

What is Services in Windows?

Windows Services are special programs that **run in the background** to help the operating system and applications work properly.

◆ Key Features:

- They **start automatically** when Windows boots.
- They **don't have a user interface** (you don't see them like normal apps).
- They often run with **higher system permissions**.

◆ Examples of Services:

Service Name	What It Does
Windows Update	Checks and installs updates
Print Spooler	Manages printing tasks
Windows Defender	Runs antivirus protection
Bluetooth Support	Manages Bluetooth connections
DHCP Client	Automatically gets IP address

◆ Why Services Are Important:

- They keep your system secure, updated, and connected.
- Many apps **depend on services** to function properly.

◆ How to View or Manage Services:

1. Press Windows + R
2. Type services.msc → Press Enter
3. You'll see a list of all services:
 - **Status:** Running / Stopped
 - **Startup Type:** Automatic / Manual / Disabled

◆ Service Startup Types:

- **Automatic** – Starts with Windows
- **Manual** – Starts when needed
- **Disabled** – Doesn't run at all
