

What is Cupp?

CUPP is a **Python tool** used to generate targeted **custom wordlists** based on information gathered about a specific target (like name, birthdate, pet, company, etc.). It's often used in **social engineering** and **password dictionary attacks**.

Features of Cupp

- Creates **personalized wordlists** using:
 - First name, last name
 - Birthdate
 - Pet names
 - Favorite sports, music, nicknames
- Helps in **dictionary attacks**
- Simple CLI-based tool

How to Use Cupp

Installation

```
git clone https://github.com/Mebus/cupp.git
```

```
cd cupp
```

```
python3 cupp.py
```

Running Cupp:

```
python3 cupp.py -l
```

Then it will ask questions like:

Enter name: anish

Nickname: ani

Birthdate (DDMMYYYY): 27081995

Pet name: bruno

Favorite number: 777

 It will generate a wordlist file like anish.txt with combinations: anish1995, ani777, bruno27, anishbruno777, etc.

Cupp Syntax Summary

Command	Description
python3 cupp.py -i	Interactive mode
python3 cupp.py -l	View license
python3 cupp.py -h	Help/usage
python3 cupp.py -w	Generate wordlist with custom info
python3 cupp.py -v	View version

Use Case

Used by ethical hackers and penetration testers to:

- Build **custom dictionaries** for a target
- Improve the success rate of **brute force** and **dictionary** attacks

Note:

Use only in **legal environments** (CTFs, penetration tests with permission). Misuse can lead to legal consequences.
