

Chapter 7- Disk Management, Task Manager & Services

Disk Management (Very Important Tool)

How to Open Disk Management?

 Press **Windows + R**

 Type: diskmgmt.msc

What is Disk Management?

 Tool used to:

- Manage hard disks / SSDs 
 - Create / delete partitions
 - Format drives
 - Check disk status
-

Important Concept:

 Disk numbering starts from **0**

Disk Meaning

Disk 0 First disk

Disk 1 Second disk

Partitions in Disk

👉 Every disk contains:

- System Partition
 - OS Partition (C Drive)
 - Recovery Partition
-

System Partition (EFI Partition)

★ What is EFI Partition?

👉 Special partition where boot files are stored

Contains:

- bootmgr
 - EFI files
 - BitLocker keys 
-

⚠ Important:

👉 OS does NOT search boot files in C drive

👉 It searches inside **EFI partition**

BitLocker Encryption (Important Security Concept)

★ What is BitLocker?

👉 Disk encryption feature in Windows

Purpose:

- Protect data from unauthorized access
-

How it Works?

Stores:

- Encryption key 
- Hardware ID (HW ID / MAC-based identity)

Stored in:

✓ EFI/System Partition

Scenario:

 If someone removes your disk and connects to another system:

 System will ask:

✓ **25-digit BitLocker recovery key**

Why?

 Hardware ID mismatch → security triggered

Example:

 Like ATM card + PIN

 Without correct PIN → no access

Recovery Partition

★ What is Recovery Partition?

👉 Hidden partition used for:

- System repair
- Troubleshooting
- OS recovery

📌 Scenario:

👉 If C drive corrupt → Recovery screen appears

🔍 Check Disk Type (MBR or GPT)

Steps:

1. Right-click **Disk 0**
2. Click **Properties**
3. Go to **Volumes**
4. Check **Partition Style**

Use of Disk Management

👉 Used when:

- Managing partitions
- Changing disk size

- Formatting drives
 - Troubleshooting disk issues
-

Task Manager (Very Important Tool)

How to Open?

 Shortcut: **Ctrl + Shift + Esc**

What is Task Manager?

 Tool used to manage:

- Running tasks
 - Background processes
-

Task Manager Tabs (Detailed)

Processes Tab

 Shows:

- Running applications
 - Background processes
-

Meaning:

 Process = Running program

2 Performance Tab

👉 Shows:

- CPU usage
- RAM usage
- Disk usage
- Wi-Fi / Ethernet 🌐
- GPU usage

🔍 **Advanced Check:**

👉 Click CPU → Open **Resource Monitor**

👉 Shows:

- Core usage
- Thread usage

⚠️ **Troubleshooting:**

👉 If app using too many threads:

- App outdated
- App not updated
- Malware attached

🧠 **Concept: Process Hooking**

👉 Virus attaches to a process

👉 Result:

- High CPU usage

- Slow system
-

Common High Usage Processes:

- System
 - Memory Compression
 - Antivirus
 - Browser
-

App History

 Shows:

- Recently used apps
 - Usage history
-

Startup Tab (Very Important 🔥)

What is Startup Apps?

 Apps that start automatically when system boots

Problem:

 Too many startup apps → Slow boot

Solution:

 Disable unnecessary apps

Malware Detection Trick:

- 👉 If unknown app from **AppData location** in startup
 - 👉 → It is likely malware
-

💡 Example:

- 👉 Like too many apps opening in mobile → slow performance
-

5 Users Tab

👉 Shows:

- Logged-in users
 - Their processes
-

6 Services Tab

★ What are Services?

- 👉 Background tasks that run system functions
-

🔍 Open via:

- 👉 Windows + R → services.msc
-

Important Windows Services

◆ 1. Windows Search

- 👉 Service Name: **Windows Search**
 - 👉 Used for search bar functionality
-

◆ 2. Print Spooler

- 👉 Service Name: **Print Spooler**
 - 👉 Manages printing jobs 
-

◆ 3. Windows Update

- 👉 Service Name: **Windows Update**
 - 👉 Handles OS updates
-

◆ 4. WLAN AutoConfig

- 👉 Service Name: **WLAN AutoConfig**
 - 👉 Manages Wi-Fi connections 
-

◆ 5. Windows Audio

- 👉 Service Name: **Windows Audio**
 - 👉 Controls sound 
-

◆ 6. Bluetooth Service

- 👉 Service Name: **Bluetooth Support Service**
 - 👉 Handles Bluetooth devices
-

◆ 7. Microsoft Edge Service

👉 Browser location:

C:\Program Files (x86)\Microsoft\Edge\Application

🧠 Real IT Support Troubleshooting

🚗 Scenario: System Slow

👉 Check:

- Startup apps
 - CPU usage
 - Background processes
-

✗ Scenario: No Internet

👉 Check:

- WLAN AutoConfig service
-

🔊 Scenario: No Sound

👉 Check:

- Windows Audio service
-

🖨️ Scenario: Printer Not Working

👉 Restart:

- Print Spooler service
-

Scenario: Suspicious Activity

 Check:

- AppData folder
 - Unknown startup apps
-

Pro IT Support Tips

- ✓ Always check **Task Manager first**
 - ✓ Disable unnecessary startup apps
 - ✓ Monitor CPU & RAM usage
 - ✓ Use services for quick fixes
 - ✓ Check BitLocker before removing disk
-

Final Understanding

-  Disk Management = Disk control 
 -  Task Manager = Process control 
 -  Services = Background engine 
 -  BitLocker = Security layer 
-

Chapter 7 (SUMMARY)

Disk Management

 Tool for managing disks & partitions

 **Open:**

 Windows + R → diskmgmt.msc

Uses:

- Create/Delete partitions 
 - Format drives
 - Extend/Shrink disk
 - Check disk status
-

Important Concepts:

- Disk numbering starts from **0**
 - Disk 0 = First disk
-

Important Partitions

- EFI (System Partition) 
 - C Drive (OS) 
 - Recovery Partition 
-

BitLocker (VERY IMPORTANT)

 Disk encryption feature

 **Purpose:**

- Protect data from unauthorized access

⚠ Important:

👉 Uses:

- Recovery key (25-digit)
- Hardware ID

👉 If disk moved → key required

Recovery Partition

👉 Used for:

- Repair system
 - Reset Windows
-

Task Manager

👉 Shortcut: Ctrl + Shift + Esc

Important Tabs

1 Processes

👉 Running apps + background processes

2 Performance

👉 Shows:

- CPU 
- RAM 
- Disk

- Network 🌐
-

3 Startup (VERY IMPORTANT 🔥)

👉 Apps that start on boot

⚠️ Too many apps = Slow system

4 Users

👉 Logged-in users

5 Services

👉 Background system processes

⚙️ Important Services

- Windows Update 🔄
 - Windows Audio 🔊
 - WLAN AutoConfig 📶
 - Print Spooler 🖨️
-

🧠 Malware Detection Concept

👉 Check:

- AppData folder
 - Unknown startup apps
-

🔧 Troubleshooting Logic

👉 System slow:

- Check CPU + RAM + startup

👉 No internet:

- Check WLAN service

👉 No sound:

- Check audio service

🎯 CONCLUSION

👉 Core tools:

- Disk Management = Disk control 💾
- Task Manager = Process control 🧠
- Services = Background engine ⚙️
- BitLocker = Security 🔒

👉 Final line:

“A real IT Support engineer always starts troubleshooting from Task Manager” 🔥

Q & A

◆ DISK MANAGEMENT QUESTIONS

? Q1: What is Disk Management?

👉 Answer:

Disk Management is a Windows tool used to manage storage devices like hard disks and SSDs.

It allows creating, deleting, formatting, and resizing partitions.

? Q2: How do you open Disk Management?

👉 Answer:

Press Windows + R → type diskmgmt.msc → press Enter.

? Q3: Why disk numbering starts from 0?

👉 Answer:

Because system internally follows zero-based indexing, so first disk is labeled as Disk 0.

◆ PARTITION QUESTIONS

? Q4: What is EFI partition?

👉 Answer:

EFI partition stores boot files required to start the operating system. Without it, system cannot boot.

? Q5: What is recovery partition?

👉 Answer:

A hidden partition used for repairing or resetting the operating system.

◆ BITLOCKER QUESTIONS (VERY IMPORTANT)

? Q6: What is BitLocker?

👉 Answer:

BitLocker is a disk encryption feature in Windows that protects data from unauthorized access.

? Q7: How does BitLocker work?

👉 Answer:

It uses:

- Encryption key
- Hardware ID

👉 If hardware changes → system asks for recovery key.

? Q8: What happens if disk is removed?

👉 Answer:

System will ask for BitLocker recovery key before allowing access.

◆ TASK MANAGER QUESTIONS

? Q9: What is Task Manager?

👉 Answer:

Task Manager is a tool used to monitor and manage running processes, performance, and system resources.

? Q10: What is a process?

👉 Answer:

A process is a program that is currently running on the system.

? Q11: What is startup application?

👉 Answer:

Applications that start automatically when the system boots.

? Q12: Why system becomes slow at startup?

👉 Answer:

Because too many startup applications consume CPU and RAM resources.

◆ SERVICES QUESTIONS

? Q13: What are Windows services?

👉 Answer:

Services are background programs that perform system functions without user interaction.

? Q14: How do you open services?

👉 Answer:

Press Windows + R → type services.msc.

? Q15: What is Print Spooler?

👉 Answer:

It manages print jobs sent to the printer.

? Q16: What is Windows Audio service?

👉 Answer:

It controls sound functionality in Windows.

? Q17: What is WLAN AutoConfig?

👉 Answer:

It manages Wi-Fi connections on the system.

◆ TROUBLESHOOTING QUESTIONS (VERY IMPORTANT)

🚗 SYSTEM SLOW

? Q18: System is slow, how will you troubleshoot?

👉 Answer:

1. Open Task Manager
2. Check CPU usage
3. Check RAM usage
4. Disable startup apps
5. Close unnecessary processes

NO INTERNET

? Q19: Internet not working?

Answer:

- Check WLAN AutoConfig service
- Restart network adapter
- Check IP

NO SOUND

? Q20: No sound issue?

Answer:

- Check Windows Audio service
- Restart service
- Check drivers

PRINTER ISSUE

? Q21: Printer not working?

Answer:

- Restart Print Spooler service
 - Check printer connection
-

MALWARE DETECTION

? Q22: How to detect malware?

👉 Answer:

- Check AppData folder
 - Check unknown startup apps
 - Monitor CPU usage
-

◆ REAL JOB SCENARIOS

? Q23: System suddenly slow after installing software?

👉 Answer:

- Check startup apps
 - Check background processes
 - Remove unwanted software
-

? Q24: Unknown app in startup?

👉 Answer:

👉 Possible malware

👉 Disable and remove it

? Q25: Disk not visible?

👉 Answer:

- Check Disk Management
- Assign drive letter
- Initialize disk

◆ INTERVIEW IMPRESSION QUESTIONS

? Q26: What is your troubleshooting approach?

👉 Answer:

- Identify problem
- Check Task Manager
- Analyze usage
- Fix root cause

? Q27: Which tool do you use first?

👉 Answer:

👉 Task Manager (for quick diagnosis)
