

Chapter 11- Control Panel in Detail

1. File Explorer Options (VERY IMPORTANT for Security)

◆ What is File Explorer Options?

This setting controls how files and folders are displayed in Windows.

👉 You can open it in 2 ways:

- Control Panel → File Explorer Options
 - This PC → 3 dots (...) → Options
-

Important Settings

Show Hidden Files & Folders

- You can enable:
 - ✓ Show hidden files
 - ✗ Don't show hidden files

👉 Why important?

- Attackers hide malware files
 - IT support needs to see hidden files for troubleshooting
-

Hide Extensions for Known File Types (VERY CRITICAL)

● If ENABLED (Ticked):

- File extension is hidden
- Example:

abc.pdf.exe → shows as abc.pdf ✗

● If DISABLED (Unticked):

- Real extension visible
- Example:

abc.pdf.exe → shows as abc.pdf.exe ✓

🧠 Why should we UNCHECK this?

👉 Because attackers trick users like this:

🎯 Attack Example:

- Real file → virus.exe
 - Renamed to → invoice.pdf.exe
 - User sees → invoice.pdf
 - User opens → virus runs ✨
-

💊 Daily Life Example:

Like a **fake medicine label** 💊

→ Looks safe, but actually harmful

⚠️ Hide Protected OS Files

- If you UNCHECK this:

👉 You can see:

\$Recycle.Bin

System files

📌 Important for SOC / Cyber Security

2. Fonts

- You can install custom fonts 
 - Used in:
 - Designing
 - Documents
 - UI customization
-

3. Indexing Options

◆ What is Indexing?

Windows stores file information to **speed up search results**

Problem:

- File installed but not showing in search

Solution:

1. Open Indexing Options
2. Click Advanced
3. Click **Rebuild**

It rebuilds search database 

Example:

Like **Google re-indexing a website** 

4. Internet Options (Proxy & Networking)

◆ What is Proxy?

A **middle server** between you and the internet

Flow:

You → Proxy → Internet

👉 Website sees **proxy IP**, not your real IP

Why use Proxy/VPN?

- Hide public IP
 - Improve privacy
 - Bypass restrictions
-

⚠ Troubleshooting Scenario:

✖ Error:

"No Internet Connection (Proxy Error)"

Fix:

- Go to:
 - Internet Options → Connections → LAN Settings
 - Check:
 - Proxy enabled or not
-

Example:

Like sending message through a **middleman** 

5. Microsoft Outlook (VERY IMPORTANT for IT JOB)

◆ Problem:

Outlook not opening ❌

Root Cause:

- Corrupt profile
 - Sync issue
 - Data file problem
-

Solution (MOST IMPORTANT INTERVIEW ANSWER):

“I will rebuild Outlook profile”

Steps:

1. Control Panel
 2. Mail (Microsoft Outlook)
 3. Remove email account
 4. Re-add email
-

Outlook Data Files

OST File (Offline Storage Table)

- Location:

C:\Users\<Username>\AppData\Local\Microsoft\Outlook

- Stores:

- Emails (offline)
- Syncs with server

PST File (Personal Storage Table)

- Used for:
 - Backup
 - Migration
-

Scenario:

- Delete email account
 - OST file still exists
 - Re-login → Outlook syncs old data automatically
-

Migration Case:

- Convert OST → PST using tool
 - Load PST in another system
-

Daily Example:

Like WhatsApp backup 
→ Data restored after login

6. Network and Sharing Center

What it manages:

- WiFi
 - Ethernet
 - IP settings
-

Key Options:

- Change Adapter Settings
 - IPv4 Configuration
 - Advanced Sharing
-

Use Case:

- Assign static IP
 - Troubleshoot network issues
-

7. Power Options (Performance Impact)

What it controls:

- Sleep
 - Shutdown behavior
 - Display timeout
-

Important:

 Slow system can be caused by:

- Wrong power settings
-

Fix:

1. Go to Power Options
 2. Advanced Settings
 3. Processor Power Management
-

💡 **If driver missing:**

👉 **Install Power Management Driver**

🔧 **Example:**

Like giving **less fuel to engine** 🚗 → **slow speed**

📦 **8. Programs and Features**

◆ **What it shows:**

- Installed applications
-

🔧 **Actions:**

- Uninstall
 - Repair
-

◆ **Windows Features:**

- Turn Windows features ON/OFF
-

⚠️ **Note:**

- Available in **Pro/Enterprise**
 - Limited in **Home version**
-

🔧 **9. Recovery Options (VERY IMPORTANT)**

◆ **Options Available:**

1. Create Recovery Drive
2. System Restore
3. Configure System Restore

Recovery Drive

- 👉 Backup of OS
 - 👉 Used when system crashes
-

System Restore (MOST IMPORTANT)

◆ **What it does:**

Reverts system to previous state

Scenario:

- Installed Photoshop at 5:00 PM
- System crashed at 5:01 PM

👉 Restore to **4:59 PM**

Steps:

1. Open System Restore
 2. Click Next
 3. Select:
 - Date
 - Time
 - Description
 4. Select C: Drive
 5. Click Finish
-

Important:

- Personal data NOT deleted
 - Only system changes reversed
-

Enable System Restore:

1. Go to Configure System Restore
 2. Select Drive
 3. Click Configure
 4. Turn ON protection
-

Example:

Like **Undo button (Ctrl + Z)** 

IT Support Troubleshooting Summary

System Slow:

- Check Power Settings
 - Update drivers
 - Disable startup apps
-

No Internet:

- Check Proxy settings
 - Check adapter settings
-

Outlook Issue:

 Rebuild profile (IMPORTANT)

Virus Detection:

- Check file extensions
 - Check AppData
 - Check hidden files
-

Search Not Working:

- Rebuild indexing
-

Real-Life Summary Table

Feature	Example
File Extension	Fake label attack 
Proxy	Middleman 
Outlook OST	Offline WhatsApp backup 
System Restore	Undo button 
Indexing	Google search engine 

Conclusion

This lecture is **VERY IMPORTANT** for real IT support job because:

- ✓ Helps in **virus detection**
 - ✓ Helps in **Outlook troubleshooting (interview question)**
 - ✓ Helps in **system recovery**
 - ✓ Helps in **network issue solving**
-

Q & A

SECTION 1: File Explorer Options (Security Focus)

Q1: What are File Explorer Options?

Answer:

File Explorer Options control how files and folders are displayed in Windows

 It allows you to:

- Show/Hide hidden files
- Show file extensions
- Control folder behavior

Simple Explanation:

It is like a “visibility control panel” for files.

Q2: How do you open File Explorer Options?

Answer:

Two methods:

1. Control Panel → File Explorer Options
 2. This PC → Click (···) → Options
-

Q3: Why is “Show Hidden Files” important?

Answer:

Hidden files are often used by:

- System processes 
- Malware 

👉 IT Support enables this to:

- Detect hidden viruses
 - Troubleshoot system issues
-

? **Q4: Why should we uncheck “Hide extensions for known file types”?**
(VERY IMPORTANT 🔥)

✅ **Answer:**

Because hiding extensions is a **major security risk**

👉 Example:

- File name: invoice.pdf.exe
- If extension hidden → shows as invoice.pdf ❌
- User thinks it's safe → opens → virus executes 💣

💡 **Perfect Interview Line:**

“I always uncheck this option to prevent extension spoofing attacks.”

? **Q5: What is extension spoofing attack?**

✅ **Answer:**

It is a technique where attackers rename malicious files to look like safe files

👉 Example:

- virus.exe → report.pdf.exe

👉 User thinks it's PDF → but it is actually executable

? **Q6: What happens if you uncheck “Hide protected OS files”?**

✅ **Answer:**

You can see system-level files like:

- \$Recycle.Bin

- System files

⚠ Used in:

- Advanced troubleshooting
- Cybersecurity analysis

SECTION 2: Fonts

? Q7: What is Fonts option in Control Panel?

✓ Answer:

It allows you to:

- Install fonts 
- Manage typography

👉 Used in:

- Designing
- UI customization

SECTION 3: Indexing Options

? Q8: What is Indexing?

✓ Answer:

Indexing is a feature where Windows stores file information to make search faster 

💡 Like Google indexing websites

? Q9: Search is not showing files. What will you do?

✓ Answer:

Steps:

1. Open Indexing Options
2. Click Advanced
3. Click Rebuild

👉 This recreates search database

? Q10: Why indexing is important?

✓ Answer:

- Faster search
 - Better file discovery
 - Improved user experience
-

SECTION 4: Internet Options (Proxy)

? Q11: What is a Proxy?

✓ Answer:

A proxy is a middle server between user and internet 

👉 Flow:

User → Proxy → Internet

? Q12: Why do companies use proxy?

✓ Answer:

- Hide IP address 
- Control internet access

- Monitor employee activity

? Q13: No internet but WiFi connected. What will you check?

✓ Answer:

Check Proxy settings:

1. Internet Options
2. Connections → LAN Settings
3. Verify proxy enabled/disabled

? Q14: What is difference between Proxy and VPN?

✓ Answer:

Proxy	VPN
Works at app level	Works system-wide
Less secure	More secure
Faster	Slightly slower

 **SECTION 5: Outlook (VERY IMPORTANT 🔥🔥)**

? Q15: Outlook not opening. What is your answer?

✓ Answer (BEST INTERVIEW ANSWER):

 "I will rebuild the Outlook profile."

? Q16: What is Outlook profile?

✓ Answer:

It stores:

- Email configuration
 - Account settings
 - Data file links
-

? Q17: Steps to rebuild Outlook profile?

✓ Answer:

1. Control Panel
 2. Mail (Microsoft Outlook)
 3. Remove account
 4. Re-add account
-

? Q18: What is OST file?

✓ Answer:

OST (Offline Storage Table):

- Stores emails locally 
- Syncs with server

• Location:

AppData\Local\Microsoft\Outlook

? Q19: What is PST file?

✓ Answer:

PST (Personal Storage Table):

- Used for backup
 - Used for migration
-

? Q20: OST vs PST difference?

✓ Answer:

OST	PST
Syncs with server	Standalone file
Auto-created	Manually used
Offline access	Backup/migration

? Q21: Outlook data recovery scenario?

✓ Answer:

If OST exists:

👉 Re-login → data syncs automatically

If migration needed:

👉 Convert OST → PST

SECTION 6: Network & Sharing Center

? Q22: What is Network & Sharing Center?

✓ Answer:

It manages:

- WiFi
- Ethernet
- IP configuration

? Q23: What is static IP?

✓ Answer:

Manual IP configuration instead of automatic DHCP

? Q24: When do we use static IP?

✓ Answer:

- Servers
 - Printers
 - Network devices
-

? Q25: How to troubleshoot network issue?

✓ Answer:

1. Check adapter
 2. Check IP settings
 3. Check driver
 4. Check network
-

⚡ SECTION 7: Power Options

❓ Q26: What are Power Options?

✅ Answer:

Controls:

- Sleep
- Shutdown
- CPU performance

❓ Q27: How power settings affect performance?

✅ Answer:

If CPU power is limited:

👉 System becomes slow 🐢

❓ Q28: How to fix slow performance due to power settings?

✅ Answer:

1. Power Options
 2. Advanced Settings
 3. Processor Power Management
 4. Increase performance
-

SECTION 8: Programs & Features

? Q29: What is Programs & Features?

✓ Answer:

Shows installed software

👉 Used to:

- Uninstall apps
- Repair apps

? Q30: What is Windows Features?

✓ Answer:

Enable/disable Windows components

👉 Example:

- .NET Framework
- Hyper-V

SECTION 9: Recovery Options (VERY IMPORTANT 🔥)

? Q31: What is System Restore?

✓ Answer:

System Restore returns system to previous state 

👉 Without affecting personal data

? Q32: Real scenario of System Restore?

✓ Answer:

- Installed software → system crashed
 - Restore to previous point
-

? Q33: Does System Restore delete files?

✓ Answer:

✗ No

👉 Only system changes are reversed

? Q34: How to enable System Restore?

✓ Answer:

1. Configure System Restore
 2. Select drive
 3. Enable protection
-

? Q35: What is Recovery Drive?

✓ Answer:

Backup of OS used when system crashes

SECTION 10: Real IT Support Scenarios

 **Q36: How will you detect virus from files?**

 **Answer:**

1. Show hidden files
2. Show extensions
3. Check AppData
4. Check suspicious files

 **Q37: Outlook issue in company laptop?**

 **Answer:**

 Rebuild profile (most common fix)

 **Q38: Search not working?**

 **Answer:**

 Rebuild indexing

 **Q39: No internet issue?**

 **Answer:**

 Check proxy + adapter

? Q40: System slow?

✓ Answer:

1. Check power settings
 2. Check startup apps
 3. Check drivers
-

? Q41: How do you approach troubleshooting?

✓ Perfect Answer:

1. Identify issue 🔍
 2. Ask user questions 🗣️
 3. Check system settings
 4. Analyze root cause
 5. Apply fix
 6. Verify solution
-

🔲 FINAL SUMMARY

- 👉 File Explorer = Security control 🔒
 - 👉 Indexing = Search engine 🔍
 - 👉 Proxy = Middleman 🌐
 - 👉 Outlook = Most asked interview topic 📧
 - 👉 System Restore = Undo button ↶
-
