

Chapter 13- Security, User Accounts & Enterprise Access

1. Security and Maintenance (UAC – User Account Control)

◆ What is UAC?

User Account Control (UAC) is a security feature in Windows that **asks permission before making system-level changes**.

 Example prompt:

“Do you want to allow this app to make changes to your device?”

◆ Why UAC is Important?

- Prevents unauthorized changes 
 - Stops malware from installing automatically 
 - Protects system files 
-

◆ Where to Find UAC Settings?

 Control Panel → **Security and Maintenance**

◆ UAC Levels Explained:

Level	Behavior
Always Notify 	Asks for every small change
Recommended 	Balanced security (BEST)
Never Notify 	No alerts (NOT SAFE)

👉 **Best Practice:** Keep it on **Recommended**

🔧 **Troubleshooting Tip:**

If software is not installing:

- Run as Administrator 🧑💻
 - Check UAC settings
-

💡 **Real-Life Example:**

Installing software like Photoshop → UAC popup comes → You allow it → Installation proceeds.

🌐 **2. Task – Bypass Internet Requirement (Windows 11 Setup)**

⚠️ Windows 11 requires:

- Internet 🌐
 - Microsoft account login 📧
-

◆ **How to Bypass (Step-by-Step):**

- 1 Start Windows installation
- 2 When it asks for internet → Press:

Shift + F10

- 3 Command Prompt opens

- 4 Type:

OOBE\BYPASSNRO

- 5 Press Enter → System will restart

6 Now you will see:
👉 “I don’t have internet” option

7 Select:
👉 Continue with limited setup

🎯 Why This is Used?

- For offline installation
 - For testing in lab / VMware 🖥️
 - For IT troubleshooting
-

💡 Real-Life Example:

Company laptops are prepared without internet → Later domain joined.

👤 3. User Accounts (Very Important)

◆ Types of Users:

👤 Admin User

- Full access 🔓
- Install, delete, modify anything

👤 Standard User

- Limited access 🔒
 - Can only read/use apps
-

◆ Types of Accounts:

1 Local Account

- Works only on one PC 
- No cloud sync

👉 Example:

Desktop files from Laptop A → NOT visible on Laptop B

2 Online Account (Microsoft Account)

- Requires email + internet 
- Sync across devices 

👉 Example:

Login on another laptop → Same data visible

◆ Where to Manage Accounts?

📌 Settings → Accounts

Options include:

- Your Info 
 - Sign-in Options 
 - Access Work or School 
 - Other Users 
-

4. Sign-in Options (Security Methods)

◆ Available Options:

- Password 
- PIN 
- Fingerprint 
- Face Recognition 

◆ Dynamic Lock

 Locks PC automatically when you move away

 Requirement:

- Bluetooth device connected

Example:

You walk away with phone → Laptop locks automatically

5. Linked Devices

- Connect mobile with system 
 - Access:
 - Calls 
 - Messages 
 - Notifications 
-

6. Work Account (Enterprise Concept)

◆ What is Work/School Account?

- Used in companies 
 - Managed by organization
-

◆ What is Entra ID (Azure AD)?

- Previously called **Azure AD**
- Now called **Microsoft Entra ID**

👉 Used for:

- Company login
 - Email authentication
 - Device control
-

◆ How to Join Device to Entra ID?

Method 1:

- Settings → Accounts → Access Work or School
- Enter company email + password

Method 2:

- During setup (online account login)
-

Example:

Employee logs in → Laptop automatically configured with company policies

7. Creating Local Users

◆ Method 1:

Settings → Accounts → Other Users

◆ Method 2 (Advanced):

Run command:

lusrmgr.msc

⚠ Not available in Home edition

8. Troubleshooting Login Issues

◆ Scenario:

User cannot login using:

- Fingerprint
- Face recognition

👉 Error: Already configured but not working

Root Cause:

- Old biometric data still stored
 - Corrupted authentication data
-

◆ Where is Biometric Data Stored?

📌 Path:

C:\Windows\System32\WinBioDatabase

👉 Data stored in encrypted format 🔒

🔧 Solution:

- 1 Go to path above
 - 2 Take ownership (Admin required)
 - 3 Delete files
 - 4 Restart system
 - 5 Reconfigure fingerprint/face
-

💡 Real-Life Example:

Employee says:

“Face unlock not working”

👉 You reset biometric database → Issue solved ✅

⚡ 9. IT Support Mindset (Important)

◆ Always Think Like This:

- ✓ Identify issue
 - ✓ Check user vs system issue
 - ✓ Check logs / settings
 - ✓ Fix root cause (not temporary)
-

Quick Troubleshooting Examples:

Problem	Solution
Cannot login	Reset biometric / password
Setup stuck	Bypass internet
App not installing	Check UAC
Work account issue	Rejoin Entra ID

Final Summary

- UAC protects system from unauthorized changes 
 - Windows 11 requires internet but can be bypassed 
 - Users: Admin vs Standard 
 - Accounts: Local vs Online 
 - Entra ID used in companies 
 - Biometric data stored in system path 
 - IT support = Fast troubleshooting + correct diagnosis 
-

Q & A

UAC (User Account Control)

Q1: What is UAC?

Answer:

User Account Control (UAC) is a Windows security feature that asks for permission before allowing system-level changes.

Example:

“Do you want to allow this app to make changes?”

Simple Explanation:

UAC acts like a **security guard**  that asks before anything risky happens.

Q2: Why is UAC important?

Answer:

- Prevents unauthorized changes 
- Blocks malware auto-installation 
- Protects system files 

Interview Line:

“UAC ensures that no application can make critical changes without user approval.”

? Q3: What are UAC levels?

✓ Answer:

Level	Meaning
Always Notify 	Alerts for every action
Recommended 	Balanced security (Best)
Never Notify 	No protection (Dangerous)

 Always use **Recommended**

? Q4: What if software is not installing?

✓ Answer:

Steps:

1. Run as Administrator 
2. Check UAC settings
3. Disable antivirus temporarily (if required)

WINDOWS 11 INTERNET BYPASS – INTERVIEW

? Q5: How to bypass internet requirement in Windows 11?

✓ Answer:

Steps:

1. During setup → Press **Shift + F10**
2. Type:

OOBE\BYPASSNRO

3. Restart

4. Select:

👉 "I don't have internet"

? **Q6: Why do we use this method?**

✓ **Answer:**

- Offline installation 🖥️
- Lab testing (VMware) 🧪
- Troubleshooting

👤 **USER ACCOUNTS – INTERVIEW QUESTIONS**

? **Q7: Types of users in Windows?**

✓ **Answer:**

👤 **Admin User**

- Full control 🔓
- Install/uninstall apps

👤 **Standard User**

- Limited access 🔒
- Cannot make system changes

🎯 **Best Practice:**

Use standard user for security

? Q8: Difference between Local Account and Microsoft Account?

✓ Answer:

Feature Local Account Microsoft Account

Internet Not required Required

Sync No Yes ☁

Access Single PC Multiple devices

? Q9: Where do you manage user accounts?

✓ Answer:

- Settings → Accounts
- OR command:

lusrmgr.msc

? Q10: What is Dynamic Lock?

✓ Answer:

Automatically locks system when user moves away.

👉 Uses Bluetooth device 📱

🔒 SIGN-IN OPTIONS – INTERVIEW QUESTIONS

? Q11: What are sign-in methods?

✓ Answer:

- Password 🔑
- PIN 
- Fingerprint 👉

- Face recognition 😊

? Q12: Difference between Password and PIN?

✓ Answer:

Password	PIN
Stored online/cloud	Stored locally
Can be used anywhere	Only for that device
Less secure	More secure

🏢 ENTERPRISE / WORK ACCOUNT – INTERVIEW

? Q13: What is Work or School Account?

✓ Answer:

Account managed by organization for accessing company resources.

? Q14: What is Microsoft Entra ID?

✓ Answer:

Cloud-based identity system (formerly Azure AD).

👉 Used for:

- Login authentication 🔒
- Device management 💻
- Email access 📧

? Q15: How to join system to company domain (Entra ID)?

✓ Answer:

Steps:

1. Settings → Accounts
 2. Access Work or School
 3. Enter company email
-

? Q16: What happens after joining Entra ID?

✓ Answer:

- Policies applied automatically ⚙️
 - Security settings enforced 🔒
 - Company apps installed
-

🔥 REAL-TIME SCENARIO QUESTIONS (VERY IMPORTANT)

? Q17: User cannot login using fingerprint. What will you do?

✓ Answer:

Step-by-step:

1. Check biometric settings
2. Delete old data from:

C:\Windows\System32\WinBioDatabase

3. Restart system
 4. Reconfigure fingerprint
-

? Q18: User says “Face unlock not working”

✓ Answer:

👉 Root cause:

- Corrupted biometric data

👉 Fix:

- Delete WinBioDatabase
 - Reconfigure
-

? Q19: User cannot install software

✓ Answer:

1. Check UAC
 2. Run as Administrator
 3. Check permissions
 4. Disable security temporarily
-

? Q20: Work account not syncing

✓ Answer:

1. Remove account
 2. Re-add account
 3. Check internet 🌐
 4. Check company server
-

ADVANCED INTERVIEW QUESTIONS

? Q21: Where is biometric data stored?

✓ Answer:

C:\Windows\System32\WinBioDatabase

👉 Stored in encrypted format 

? Q22: What is the difference between Admin & Standard user?

✓ Answer:

Admin	Standard
Full control	Limited
Risky	Safe
Can install apps	Cannot install

? Q23: Why should users not have admin access?

✓ Answer:

- Prevent malware 
 - Avoid accidental changes
 - Improve security 
-

TROUBLESHOOTING QUESTIONS (JOB-ORIENTED)

Q24: Windows setup stuck at internet screen

Answer:

Use:

Shift + F10 → OOBE\BYPASSNRO

Q25: User forgot password

Answer:

- Reset password from admin
 - Use Microsoft account recovery
-

Q26: System automatically locking issue

Answer:

- Check Dynamic Lock
 - Disable Bluetooth device
-

Q27: Multiple login failures

Answer:

- Check account lock policy
 - Reset password
 - Check logs
-
