

1. URLScan.io (Best Tool for Redirect Tracking)

URL: urlscan.io

► What it does:

- Shows all redirects step-by-step
- Shows screenshots
- Shows malicious reputation
- Shows final landing page
- Shows scripts and connections

► How to use:

1. Copy the suspicious link
2. Open **urlscan.io**
3. Click “Scan” → Paste the link
4. Submit
5. Check the **Redirect Chain** section

2. Redirect Checker (Very Simple)

URL: <https://redirectdetective.com>

(or)

<https://www.redirect-checker.org/>

► What it does:

- Shows full redirect chain

- HTTP status codes (301, 302, 307, etc.)
- Final destination URL

► **How to use:**

1. Paste URL
2. Click “Check”
3. It will show:
 - First URL
 - Redirect link
 - Final URL

3. VirusTotal URL Scanner

URL: virustotal.com → URL section

► **What it does:**

- Shows redirect domains
- Shows malicious flags
- Shows domain age
- Shows related phishing indicators

► **How to use:**

1. Open VirusTotal
2. Choose **URL tab**
3. Paste the link
4. Scroll down to “**Behavior → Redirects**”

4. CURL Command in Terminal (Manual Method)

If you want to check like a cybersecurity professional:
Command:

```
curl -I -L http://example.com
```

What it shows:

- Every redirect
- Status codes
- Final URL

This is used in penetration testing.

5. “WhereGoes” Redirect Checker

URL: wheregoes.com

► Features:

- Complete redirect map
- Visual flow chart
- Tracks multiple hops
- Detects meta-refresh redirects

6. HTTPStatus.io

URL: httpstatus.io

► Features:

- Shows redirect chain
- HTTP headers
- Cookies

- Server info

How to Identify Redirection (Signs)

Look for:

- URL A → links to → URL B (indirect)
- Shortened URLs (bit.ly, tinyurl, cutt.ly)
- Link preview shows different URL
- The website loads and jumps to another site
- Header response shows 301 or 302
